

Henslow's Sparrow (*Ammodramus henslowii*)

WINTER: NO RECORDS.

SUMMER: Locally Uncommon to Fairly Common Resident at Crown City WA since the late 1990's. The 28 August 1960 record cited by Edeburn et al. (1960) is probably an early migrant.

MIGRATION:

Spring: Rare Migrant in late April (Kiff et al. 1986). Edeburn et al. (1960) cites an extremely early date of 26 March 1937; 07 May 2006 at Crown City WA (MG, DP). Singing males present from early May at Crown City WA since the late 1990's. See Summer section.

Fall: Data Insufficient. Edeburn et al. (1960) cites a late date of 28 October 1951; one on 29 September 1992 (WA).

REMARKS:
